Provella™ has unique advantages

**Provella™ promotes digestive, feminine, and immune health***

Due to factors including antibiotic use or diet, many women are at risk of suffering from unbalanced gastrointestinal (GI) or vaginal flora.¹⁻³

- Provella™ contains a proprietary blend of 6 bacterial strains chosen specifically for maximum benefit to women.*
  - Lactobacilli support urogenital health and aid proper digestion.⁴⁻⁵
- Bifidobacteria have gastrointestinal benefits and support healthy immune responses.⁶
- Provella™ contains 2 billion colony forming units (CFUs) per dose, guaranteed at time of expiry.

*The number of live bacteria in a probiotic supplement typically decreases as the product progresses through its shelf life. Choosing a product that specifies a CFU level “through the end of shelf life” rather than “at time of manufacture” can help provide reassurance that the product contains live probiotics.⁷,²²,²³

Stomach acid is a major threat to probiotics

- It has been estimated that as few as 20%-40% of certain probiotic bacteria survive passage through the gut.19 An effective delivery system is key to helping live bacteria reach the intestines where they can begin working.

The delivery system in Provella™ helps 6 bacterial strains reach the intestines*

- Formulated using a patented controlled-release technology, Provella™ has a unique delivery system that helps protect probiotic organisms from harsh stomach acid and is designed to ensure that live organisms reach the intestines, where they can begin working.20,21
